Wisconsin's Outstanding and Exceptional Resource Waters Program is designed to maintain the water quality in Wisconsin's cleanest waters. An outstanding resource water is defined as a lake or stream which has excellent water quality, high recreational and aesthetic value, and high quality fishing and is free from point source or nonpoint source pollution. An exceptional resource water is defined as a stream which exhibits the same high quality resource values as outstanding waters, but which may be impacted by point source pollution or have the potential for future discharge from a small sewer community.

This data is current as of 1999. For more information on Outstanding and Exceptional Lakes and Streams, contact Janel Pike, WDNR, Bureau of Watershed Management. (608)266-5606 [pikej@dnr.state.wi.us](mailto:pikej@dnr.state.wi.us)
